

# Developing SQL Databases

Microsoft Official Curriculum (MOC 20762)

**Course Length:** 4 days

**Course Delivery:** Traditional Classroom • Online Live

## Course Overview

This 4-day instructor-led course provides students with the knowledge and skills to develop a Microsoft SQL Server 2016 database. The course focuses on teaching individuals how to use SQL Server 2016 product features and tools related to developing a database.

## Audience

The primary audience for this course is IT Professionals who want to become skilled on SQL Server 2016 product features and technologies for implementing a database.

The secondary audiences for this course are individuals who are developers from other product platforms looking to become skilled in the implementation of a SQL Server 2016 database.

## Prerequisites

- Basic knowledge of the Microsoft Windows operating system and its core functionality.
- Working knowledge of Transact-SQL.
- Working knowledge of relational databases.

## Objectives

After completing this course, students will be able to:

- Design and Implement Tables.
- Describe advanced table designs
- Ensure Data Integrity through Constraints.
- Describe indexes, including Optimized and Columnstore indexes
- Design and Implement Views.
- Design and Implement Stored Procedures.
- Design and Implement User Defined Functions.
- Respond to data manipulation using triggers.
- Design and Implement In-Memory Tables.
- Implement Managed Code in SQL Server.
- Store and Query XML Data.
- Work with Spatial Data.
- Store and Query Blobs and Text Documents.

## Course Details

### Module 1: Introduction to Database Development

This module is used to introduce the entire SQL Server platform and its major tools. It will cover editions, versions, basics of network listeners, and concepts of services and service accounts.

#### Lessons

- Introduction to the SQL Server Platform
- SQL Server Database Development Tasks

#### Lab : SQL Server Database Development Tasks

After completing this module, you will be able to:

- Describe the SQL Server platform.
- Use SQL Server administration tools.

### Module 2: Designing and Implementing Tables

This module describes the design and implementation of tables. (Note: partitioned tables are not covered).

#### Lessons

- Designing Tables
- Data Types
- Working with Schemas
- Creating and Altering Tables

#### Lab : Designing and Implementing Tables

After completing this module, you will be able to:

- Design Tables
- Describe the various types of data
- Be able to work with schemas
- Be able to create and amend tables

### Module 3: Advanced Table Designs

This module describes more advanced table designs.

## Lessons

- Partitioning data
- Compressing Data
- Temporal Tables

## Lab : Using Advanced Table Designs

After completing this module, you will be able to:

- Describe how data can be partitioned
- Describe how data can be compressed.
- Describe Temporal tables

## Module 4: Ensuring Data Integrity through Constraints

This module describes the design and implementation of constraints.

### Lessons

- Enforcing data Integrity
- Implementing Domain Integrity
- Implementing Entity and Referential Integrity

## Lab : Ensuring Data Integrity through Constraints

After completing this module, you will be able to:

- Describe how to enforce data integrity
- Describe how to implement domain integrity
- Describe how to implement entity and referential integrity

## Module 5: Introduction to Indexes

This module describes the concept of an index and discusses selectivity, density and statistics. It covers appropriate data type choices and choices around composite index structures.

### Lessons

- Core Indexing Concepts
- Data Types and Indexes
- Single Column and Composite Indexes

## Lab : Implementing Indexes

After completing this module, you will be able to:

- Explain the need for indexes and describe the core concepts of index design
- Choose appropriate data types for indexes
- Design single column and composite indexes

### **Module 6: Designing Optimized Index Strategies**

This module includes covering indexes and the INCLUDE clause, hints, padding / fillfactor, statistics. It also execution plans and the DTE Lessons.

#### **Lessons**

- Covering Indexes
- Managing Indexes
- Execution Plans
- Using the DTE

#### **Lab : Designing Optimized Index Strategies**

After completing this module, you will be able to:

- Choose an appropriate table structure
- Implement clustered indexes and heaps

### **Module 7: Columnstore Indexes**

This module introduces Columnstore indexes.

#### **Lessons**

- Introduction to Columnstore indexes
- Creating Columnstore indexes
- Working Columnstore indexes

#### **Lab : Using Columnstore indexes**

After completing this module, you will be able to:

- Describe suitable scenarios for Columnstore indexes
- Create clustered and non-clustered Columnstore indexes
- Describe considerations for updating non-clustered Columnstore indexed tables

### **Module 8: Designing and Implementing Views**

*"The Clever Advantage"*

This module describes the design and implementation of views.

### **Lessons**

- Introduction to views
- Creating and managing views
- Performance considerations for views

### **Lab : Designing and Implementing Views**

After completing this module, you will be able to:

- Explain the concept of views
- Design, Create and Alter Views
- Create Partitioned Views

### **Module 9: Designing and Implementing Stored Procedures**

This module describes the design and implementation of stored procedures.

### **Lessons**

- Introduction to Stored Procedures
- Working with Stored Procedures
- Implementing Parameterized Stored Procedures
- Controlling Execution Context

### **Lab : Designing and Implementing Stored Procedures**

After completing this module, you will be able to:

- Design, Create and Alter Stored Procedures
- Control the Execution Context of Stored Procedures
- Implement Stored Procedures that use Parameters

### **Module 10: Designing and Implementing User-Defined Functions**

This module describes the design and implementation of functions, both scalar and table-valued. (Also discusses where they can lead to performance issues).

### **Lessons**

- Overview of Functions
- Designing and Implementing Scalar Functions
- Designing and Implementing Table-Valued Functions

*"The Clever Advantage"*

- Implementation Considerations for Functions
- Alternatives to Functions

### **Lab : Designing and Implementing User-defined Functions**

After completing this module, you will be able to:

- Design, create and alter scalar functions
- Design, create and alter table-valued functions
- Describe the performance impacts of functions

### **Module 11: Responding to Data Manipulation via Triggers**

This module describes the design and implementation of triggers.

#### **Lessons**

- Designing DML Triggers
- Implementing DML Triggers
- Advanced Trigger Concepts

### **Lab : Responding to Data Manipulation via Triggers**

After completing this module, you will be able to:

- Design DML triggers
- Implement DML triggers
- Work with Nested and Recursive Triggers

### **Module 12: Using In-Memory Tables**

This module covers the creation of in-memory tables and native stored procedures. Furthermore, advantages of in-memory tables are discussed, for example the removal of transaction blocking.

#### **Lessons**

- In-Memory tables
- Native Stored Procedures

### **Lab : In Memory OLTP**

After completing this module, you will be able to:

- Implement in-memory tables

*"The Clever Advantage"*

- Implement native stored procedures

### **Module 13: Implementing Managed Code in SQL Server**

This module describes the implementation of and target use-cases for SQL CLR integration.

#### **Lessons**

- Introduction to SQL CLR Integration
- Importing and Configuring Assemblies
- Implementing SQL CLR Integration

#### **Lab : Implementing Managed Code in SQL Server**

After completing this module, you will be able to:

- Describe SQL CLR Integration
- Detail appropriate use cases for SQL CLR Integration
- Implement SQL CLR code

### **Module 14: Storing and Querying XML Data in SQL Server**

This module covers the XML data type, schema collections, typed and un-typed columns and appropriate use cases for XML in SQL Server.

#### **Lessons**

- Introduction to XML and XML Schemas
- Storing XML Data and Schemas in SQL Server
- Implementing the XML Data Type
- Using the T-SQL FOR XML Statement
- Getting Started with xQuery

#### **Lab : Storing and Querying XML Data in SQL Server**

After completing this module, you will be able to:

- Explain the purpose and structure of XML and XML schemas
- Describe how XML data and schemas can be stored in SQL Server
- Implement the XML data type

### **Module 15: Working with SQL Server Spatial Data**

This module describes spatial data and how this data can be implemented within SQL Server.

## Lessons

- Introduction to Spatial Data
- Working with SQL Server Spatial Data Types
- Using Spatial Data in Applications

## Lab : Working with SQL Server Spatial Data

After completing this module, you will be able to:

- Describe how spatial data can be stored in SQL Server
- Use basic methods of the GEOMETRY and GEOGRAPHY data types
- Query databases containing spatial data

## Module 16: Storing and Querying Blobs and Text Documents in SQL Server

This module covers full text indexes and queries.

## Lessons

- Considerations for BLOB Data
- Working with FileStream
- Using Full-Text Search

## Lab : Storing and Querying Blobs and Text Documents in SQL Server

After completing this module, you will be able to:

- Describe the need for full-text indexing in SQL Server
- Implement a full-text index
- Perform basic full-text queries
